### **DETAILED ACTION**

This Office action is in response to the communications filed 10-1-03.

Claims 1-5, 7, 8, 10, 46-58 are pending in the instant application.

### ***Election/Restriction***

This application contains claim 48 drawn to an invention nonelected with traverse in Paper No. filed 7-26-02. A complete reply to the final rejection must include cancelation of nonelected claims (or unelected sequence numbers) or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

The pending claims have been examined with respect to SEQ ID Nos: 8-10, 25, 26, 41-43, 45, 46.

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10-1-03 has been entered.

***Response to Argument and Amendments***

**Withdrawn Rejections**

Any rejections not repeated in this Office action are hereby withdrawn.

**Maintained Rejections**

Claims 1-5, 7, 8, 10, 46-58 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement for the reasons of record set forth in the Office actions mailed 2-17-02 and 6-3-03.

Applicant's arguments filed 10-1-03 have been fully considered but they are not persuasive. Applicants argue that adequate written description has been provided for the claimed generic formulas because distinguishing attributes have been listed that are shared by the members of the genus claimed. Contrary to Applicants' assertions, the lack of terminal phosphate groups on the myriad of sequences encompassed within the claimed generic formulas, and the lack of modified internucleotide residues within the antisense oligonucleotides, do not compensate for the lack of adequate written description of the myriad of sequences encompassed within the generic formulas claimed. Furthermore, the inclusion of GT residues somewhere – either together as a dinucleotide motif or existing as separate nucleobases somewhere within the claimed generic formulas – do not provide an adequate description for the broad genus claimed. A very large number of sequences (e.g. thousands) are encompassed by these generically claimed formulas, and a representative number of species for such a broad genus has not been disclosed in the instant specification or claims to adequately describe this genus, or to concisely define the broad genus claimed.

Applicants argue that a representative number of species within the broad genus claimed have been provided to fulfill the written description requirement. Contrary to Applicants' assertions, the inclusion of over eighty sequences to represent a genus encompassing thousands of sequences is not a representative number for the very broad genus claimed. Therefore, the written description rejection is maintained.

#### ***Allowable Subject Matter***

Sequences consisting of SEQ ID Nos: 8-10, 25, 26, 41-43, 45 and 46 appear free of the prior art searched.

#### ***Conclusion***
